# CUSTOM MANUFACTURING SOLUTIONS

FROM PROTOTYPE TO PRODUCTION

# YOUR SINGLE SOURCE ON DEMAND MANUFACTURING

PrintForm produces build-to-order custom manufactured plastic & metal parts and provides expert service in transitioning customers through the design to manufacturing cycle.

## Casting Patterns

PrintForm provides investment casting patterns that assist with foundry castings, and finished master patterns used with silicone and various molding processes.

## Rapid Prototyping

Rapid Prototypes are built directly from a 3D CAD file and are ideal to test new designs. This method reduces the time and cost when bringing a new product to market.

## Concept Modeling

Early in the design process? Concept models demonstrate new ideas while operating like the finished products.

These models are used to collect feedback and can be presented as promotional material.

## End Use Parts

Need 1 custom part or 100,000?

Our services are complemented with additive manufacturing capabilities to produce a variety of materials at any quantity, allowing you immense creative freedom for plastic and metal designs.

## MISSION

Our mission is to make it easy for our customers to buy custom designed parts that meet their needs.
